PROFESSIONAL SUMMARY

Results-driven Java Developer and B.E. Computer Science graduate with hands-on experience designing scalable RESTful APIs, microservices architectures, and real-time event-driven pipelines. Proficient in Core Java, Spring Boot, Hibernate/JPA, PostgreSQL, and Apache Kafka. Delivered enterprise-grade projects demonstrating strong OOP fundamentals, design patterns, multithreading, and production-ready system design. Seeking to contribute to a high-performing team as a Java Developer.

TECHNICAL SKILLS

Core Languages:	Java (Core Java, OOP, Design Patterns, Multithreading), Python, SQL, JavaScript (Basic)
Backend / APIs:	Spring Boot, Spring MVC, Hibernate/JPA, REST APIs, JWT/OAuth, Maven, Gradle, JSON/XML
Databases:	MySQL, PostgreSQL, MongoDB, Qdrant (Vector DB) — SQL & NoSQL
Messaging:	Apache Kafka (event-driven pipelines, high-throughput streaming)
DevOps & Tools:	Docker, Git, GitHub, Linux, Postman, IntelliJ IDEA, Swagger/OpenAPI
Cloud (Familiar):	AWS basics, CI/CD concepts (GitHub Actions, Jenkins)
Concepts:	Microservices, System Design, Data Structures & Algorithms, Agile/Scrum, MVC, Debugging
AI / ML (Bonus):	LangChain4j, RAG Systems, Deep Learning, CNN, Model Deployment

INTERNSHIP EXPERIENCE

AI & Machine Learning Engineering Intern

Oct 2024 – Mar 2025

- Designed and implemented **RESTful APIs** using **Java and Spring Boot**, enabling scalable, secure backend communication for ML model deployment.
- Built real-time event-driven data pipelines with **Apache Kafka** for high-throughput streaming and asynchronous backend processing.
- Implemented **JWT-based authentication and authorization** for secure API access and model inference request handling.
- Participated in **code reviews**, system architecture discussions, and backend performance optimizations following Agile/Scrum practices.
- Managed version control and collaboration workflows using **Git and GitHub**; worked with **SQL databases** for persistent data management.

PROJECTS

Enterprise-Grade Java RAG System with Local LLM Integration

Dec 2025 – Mar 2026

Tech Stack: Java, Spring Boot, LangChain4j, Qdrant, PostgreSQL, REST APIs, Maven, Docker

- Architected a production-ready **Spring Boot microservice** with modular, loosely-coupled service layers — demonstrating enterprise system design and clean code principles.
- Designed scalable **RESTful APIs** following REST standards, with proper error handling, input validation, and Swagger/OpenAPI documentation.
- Integrated **PostgreSQL** for metadata storage, keyword retrieval, and hybrid search; applied **Hibernate/JPA**-style ORM patterns for data persistence.
- Implemented **semantic search** with Qdrant vector database — showcasing knowledge of NoSQL/caching mechanisms alongside relational databases.
- Containerized the full application stack with **Docker**; applied **Maven** for build management and dependency resolution.

Vitamin Deficiency Detection Using Deep Learning

Feb 2025 – May 2025

Tech Stack: Python, CNN, Deep Learning, Image Processing, Flask REST API

- Built an AI-powered diagnostic tool using **CNN deep learning** with image preprocessing pipelines, data augmentation, and multi-class classification.
- Developed and deployed a **Flask REST API** backend for real-time image upload, processing, and diagnostic report generation — end-to-end delivery.
- Applied software engineering best practices: modular code structure, **version control with Git**, and iterative testing/debugging cycles.

EDUCATION

Bachelor of Engineering (B.E.) — Computer Science & Engineering

2021 – 2025

Cambridge Institute of Technology, North Campus | Visvesvaraya Technological University (VTU) | Bangalore | CGPA: 7.3/10
